

### EcoPoxy GelCoat is an epoxy coating with superior chemical, abrasion and thermal resistance “new finish”.

EcoPoxy **GelCoat** is widely used as an in mold coating on composite parts to produce a durable part surface. It is a tough and strong surface coat resin that cures at room temperature and offers exceptional abrasion resistance. EcoPoxy **GelCoat** is high viscosity and has the ability to be applied thickly on vertical and overhead surfaces in one coat and cures tacky on the surface to bond with laminations. For an impact resistant coating on EPS Foam two coats are required to build an adequate thickness.

EcoPoxy **GelCoat** is a premium gel coat formulated to meet rigid requirements of boating, transportation, and containment applications. Applied in a thickness of 16-20 mils, which gives this gel coat depth to survive considerable water sanding, compounding and re polishing. EcoPoxy **GelCoat** provides superior cosmetics and a long term protective life expectancy.

*EcoPoxy GelCoat is an epoxy coating with superior chemical, abrasion and thermal resistance. It is easily applied with a brush, roller or sprayed.*

#### KEY FEATURES

- Easy to spray
- Sag Resistant
- High Gloss Retention
- Excellent Weatherability
- Low Odor, No VOC's, Non Toxic
- 100% solids content for increased build
- Produces an exceptionally tenacious etching bond for high adhesion
- Provides remarkable chemical resistance
- Excellent hardness and durability
- Self-leveling finish
- Resistant to water blistering
- 100% waterproof long term
- Wear resistant finish
