What should your company consider when transitioning to the cloud for product innovation and engineering?

1. Align Cloud Plans with Strategy
   - Digital Transformation
   - Work Anytime / Anywhere
   - Improve Agility
   - Improve Collaboration
   - Reduce Risk
   - Increase Scalability

2. Focus on Functional Needs First
   - 54% of companies are willing to trade off legacy or no functionality for cloud benefits.

3. Establish Cloud Governance
   - Companies who use cloud standards and a single process are less than one-half as likely to consider security a significant risk.

4. Take Advantage of Existing Solutions
   - Consider transitioning existing solutions to a cloud deployment if scalable to reduce change, migration, and training efforts.

5. Make the Cloud Transition
   - Cloud solutions and applications are available that provide rich industrial and engineering capabilities. Place a high priority on the cloud.
